

Nearly Easter

25/3/2014

0 Comments

Well my last post was before Christmas so thought I would put digit to keyboard. Its nearly Easter and suffice it to say we have been flat out with all sorts of projects since the New Year, work has been nationwide from Cumbria to London and South East and down into the South West. We have purchased a new Leica TS15 imaging robotic total station, this kit has a calibrated camera and we are looking forward to using the images from this inside "ELCOVISION 10 for Leica Viva", we will let you know how we get on. This years rainfall has been challenging to say the least, many of our railway bridge surveys being postponed due to flooding, sometimes decisions about which site to go to have been made at 5:30am following a quick look at the EA gauging stations. As well as the storms disrupting work it has also generated some, with rail sites in Cumbria being as a direct result of damage to sea walls or track being left hanging along coastal routes. We are all looking forward to some drier weather

Hole in sea wall filled with rock armour

Temporary rock armour protects a length of railway having been recently reinstated after storms
