Well, its been a while since our last blog posting. Since then we have been training up Marcin, our new trainee. Marcin has been learning well and is looking forward to his first winter, we hope to include him on The Survey School surveying course early next year.

We have another trainee starting in November and are sure he will enjoy getting to grips with our kit.

Work has continued throughout the year with a good variety of work. We have been involved in scour protection surveys, railway drainage surveys and culvert liner surveys on Network Rail infrastructure. As well as our rail workload we have had our usual mix of topographic, measured building and bespoke engineering surveys. One of the more interesting projects was surveying 11 culvert structures on the Humber estuary. We used a combination of standard topo work, laser scanning and boat access to cover these structures whilst dealing with random weather and tides.
