

Measured Building Survey, Historic Gates and Olympic Park

26/3/2012

0 Comments

Its been a long day travelling to and from London to complete a measured building survey of a large detached property (mansion?) in Mill Hill. Usual thing, topographic survey, elevations, floor plans and roof plan. The owner was surprised to see us there at 7:15am, sometimes its either get there early and miss the traffic or leave an hour later and be lucky to get there by lunch time!

Later this week we will carrying out a 3d laser scan of a set of historic gates in Cheltenham, these are long overdue for renovation and we will be providing topographic survey and detailed elevations.

We have been approached to price for another laser scanning survey at Olympic Park. We hope it comes off so we can take a look at the park before the games.

Whitney-On-Wye Toll Bridge Measured Building Survey

9/3/2012

0 Comments

Following a number of rail and river surveys in the north of England we have been lucky enough to change tack and survey a variety of properties in the Hereford and Shropshire area. Properties recently surveyed include a pool building in Ludlow, former Inn overlooking the River Wye and interestingly a timber toll bridge house.

Saturday morning laser scanning a former inn overlooking the River Wye. Views like this make surveying worth while!

We have recently completed a topographic and measured building survey of the Toll House at Whitney-on-Wye's famous toll bridge. The Whitney-on-Wye bridge was built in 1797 by an Act of Parliament that also exempts the toll income from tax. Again another wonderful place to have the privilege of surveying. We used the Leica C10 laser scanner to capture the elevations and external footprints for the floor plan drawings.
